PROFILE

Aspiring new Grad with hands-on experience deploying and maintaining secure, enterprise-grade infrastructure in government labs. Proven ability to automate, troubleshoot, and optimize IT systems using tools like VMware, Fortinet, and Cisco.

EDUCATION

Bachelor of Information Technology, Network Technology
Carleton University

Graduated, June 2026
Ottawa, Canada

- Relevant Coursework: System Programming, Network Management, Object-Oriented Programming, Web Development, Operating Systems, Advanced Network Routing/Switching, Network Simulation, Database

SKILLS

- **Training/Courses:** Nokia Data Center Fabric (DCF), CCNA, Advanced networking Switching
- **Networking & Tools:** FortiManager, FortiAnalyzer, Royal TS Server, BlueCat Manager, Wireshark
- **Cloud & Virtualization:** Microsoft Azure, Docker, Bare-metal Hypervisor, VMware vSphere
- **Languages:** Python, C/C++, HTML/CSS
- **Operating Systems:** Windows, Linux (RedHat, Ubuntu, RHEL, Debian)
- **Security Clearance:** Secret Level Security Clearance (Government of Canada), Ottawa, Ontario

EXPERIENCE

Shared Services Canada

June 2024 – May 2025

IT Lab Technician (ICELab) – Chief Technology Officer Branch

Ottawa, Canada

- Conducted hands-on product testing and collaborated with clients weekly to validate equipment compatibility and performance within SSC's infrastructure, ensuring high-quality network enhancements.
- Cabled over 20 servers and Cisco network devices in the ICELab to support testing and development needs; maintained meticulous records of lab inventory for asset management and testing.
- Configured multiple remote management tools such as Dell iDRAC, Lenovo XClarity, and HPE iLO, enabling efficient provisioning, monitoring, and accelerated lab deployment processes.
- Migrated Linux and Windows virtual machines from VMware vSphere 7 to vSphere 8 to ensure system compatibility with new features and security updates; minimized downtime and operational continuity.
- Utilized FortiManager and FortiAnalyzer to monitor network traffic and security events, supported troubleshooting of connectivity, configuration issues, and firewall rule violations within the lab environment.
- Resolved 15+ recurring hypervisor and VM issues, reducing test environment downtime by 40%; contributed to system stability and ensured testing workflows.

PROJECTS

Virtualized 5G Network Slicing Infrastructure (Free5GC, Containerlab, UERANSIM)

Oct 2025 – April 2026

- Deployed a 5G standalone core using Free5GC and UERANSIM across KVM VMs with isolated URLLC and shared eMBB slices to simulate a hospital network environment.
- Architected a Flask dashboard featuring SSH remote VM control and live tunnel status monitoring, enhancing system resilience and reducing downtime by 70%.
- Simulated a DDoS attack using Containerlab and iperf3 routed through the 5G tunnel, proving shared slice degradation while the isolated URLLC slice remained fully operational.
- Conducted UDP load testing measuring bitrate, jitter, and packet loss from 10 to 100 parallel streams, identifying network degradation thresholds under sustained attack traffic.

Enterprise Networking Home Lab (Cisco Catalyst 3850, TP-Link Omada, Raspberry Pi)

June 2026

- Built/documented an enterprise style network lab using Cisco Catalyst 3850, TP-Link Omada, and Raspberry Pi.
- Configured VLANs, SSH, LLDP, Layer 2 switching, and network management.
- Used Raspberry Pi cluster to use K3S and host monitoring services like Prometheus and Grafana.
