PROFILE

Network Technology graduate (Carleton BIT, June 2026) seeking an entry-level network engineering role. Enterprise networking and virtualization background from a Shared Services Canada lab. Holds Secret-level security clearance.

EDUCATION

Bachelor of Information Technology, Network Technology **Graduated, June 2026**
Carleton University, ***Ottawa, Canada***
Advanced Diploma, Computer Engineering Technology, Networking **Graduated, June 2026**
Algonquin College, *Ottawa, Canada*

- Relevant Coursework: System Programming, Network Management, DevOps, Operating Systems, Advanced Network Routing/Switching, Network Simulation, Virtualization

SKILLS

- **Training/Courses:** Nokia Data Center Fabric (DCF), CCNA, Advanced networking Switching
- **Networking & Tools:** FortiManager, FortiAnalyzer, Royal TS Server, BlueCat Manager, Wireshark
- **Cloud & Virtualization:** Microsoft Azure, Docker, Bare-metal Hypervisor, VMware vSphere, Google Cloud
- **Languages:** Python, C/C++
- **Operating Systems:** Windows, Linux (RedHat, Ubuntu, RHEL, Debian)
- **Security Clearance:** Secret Level Security Clearance (Government of Canada) **Valid, 2035-01-27**

WORK EXPERIENCE

Shared Services Canada **June 2024 – May 2025**
IT Lab Technician (ICELab) – Chief Technology Officer Branch ***Ottawa, Canada***

- Conducted hands-on product testing and collaborated with clients weekly to validate equipment compatibility and performance within SSC's infrastructure, ensuring high-quality network enhancements.
- Cabled over 20 servers and Cisco network devices in the ICELab to support testing and development needs; maintained meticulous records of lab inventory for asset management and testing.
- Configured multiple remote management tools such as Dell iDRAC, Lenovo XClarity, and HPE iLO, enabling efficient provisioning, monitoring, and accelerated lab deployment processes.
- Migrated Linux and Windows virtual machines from VMware vSphere 7 to vSphere 8 to ensure system compatibility with new features and security updates; minimized downtime and operational continuity.
- Utilized FortiManager and FortiAnalyzer to monitor network traffic and security events; supported troubleshooting of connectivity, configuration issues, and firewall rule violations within the lab environment.
- Resolved 15+ recurring hypervisor and VM issues, reducing test environment downtime by 40%; contributed to system stability and ensured testing workflows.

PROJECTS

Networking Home Lab (Cisco Catalyst 3850, TP-Link Omada, Raspberry PI Cluster) **June 2026 - Present**

- Built an enterprise style lab network on a Cisco Catalyst 3850 with VLANs, trunking, SSH and LLDP to practice Layer 2 switching like it's done at work.
- Put together a 4 node K3s cluster on Raspberry Pis to host my homelab services and pinned the node IPs so cluster traffic stays on the right network interface.
- Wrote a custom Python exporter that reads temperature and humidity off an Arduino and feeds it into Prometheus, with Grafana dashboards and email alerts through Alertmanager.

Virtualized 5G Network Slicing Infrastructure Capstone (Free5GC, Containerlab, UERANSIM) **Oct 2025 – April 2026**

- Deployed a 5G standalone core using Free5GC and UERANSIM across KVM VMs with isolated URLLC and shared eMBB slices to simulate a hospital network environment.
- Simulated a DDoS attack using Containerlab and iperf3 routed through the 5G tunnel, proving shared slice degradation while the isolated URLLC slice remained fully operational.
- Conducted UDP load testing measuring bitrate, jitter, and packet loss from 10 to 100 parallel streams, identifying network degradation thresholds under sustained attack traffic.
